

Assignment

1. Select a change project in your organization and create a requirements management plan that includes the following elements:
 - A requirements validation process that outlines the steps and techniques that will be used to validate the requirements
 - A requirements management process that outlines the steps and techniques that will be used to manage the requirements throughout the project
 - A traceability matrix that links the requirements to the project deliverables
 - Apply the requirements management plan to the selected project or scenario.

2. Prepare a report that explains the following:
 - The importance of validating and managing requirements in business analysis
 - The requirements management plan developed for the selected project or scenario
 - How the requirements management plan was applied to the selected project or scenario
 - The outcomes of applying the requirements management plan
